

## *iPod INTERFACE FOR OEM CD 'CHANGER READY' OR 'SATELLITE READY' HEADUNITS*

PIE iPod interfaces are designed to allow control of your iPod (songs, playlists, etc) through either the CD changer mode or satellite radio mode of the OEM headunit, provide digital quality sound, and at the same time keep your iPod charged. Three methods of iPod control are made possible with our "POD", "POD2", and "POD/S" line of interfaces depending on your iPod display and control preferences.

**"POD"** - (Replaces external factory CD changer, if present) - Allows track up/down, FF, REW, Shuffle, and direct access to 6 iPod playlists from the OEM headunit (iPod screen and controls are disabled).

**"POD2"** - (Replaces external factory CD changer, if present) - Allows track up/down, FF, and REW from the OEM headunit and retains iPod screen and controls.

**"POD/S"** - (Uses satellite controls) - Allows full control of the iPod and displays iPod text information on the radio display using the Satellite radio mode of the OEM headunit.
